

The reseller invited testing— so we accepted.

A coating of **green paint** can't hide the truth.

The reseller invited testing, so we accepted. A test system was built containing simulated blockages and a common process called snaking or rodding was performed—it caused significant damage. See for yourself and watch the video. Don't be fooled into thinking that by covering gray cast iron soil pipe with green epoxy paint it is somehow transformed into a different product—it's simply a cover up. A coating of green paint can't hide the fact that cast iron is not appropriate for special acid waste.

To learn the truth about epoxy painted cast iron soil pipe, watch the video at
